# EXECUTIVE SUMMARY

Maneri Bhali Stage I Hydro Electric Project consists of a 39 m high concrete gravity dam across the river Bhagirathi at Maneri, 15 km towards Gangotri from district headquarter Uttarkashi. The 90 MW capacity surface power house comprises of 3 Francis turbines of 30 MW each located at Tiloth. The generation from Maneri Bhali Stage I scheme is around 450 MU per year since its commissioning in 1984. It has been proposed to undertake rehabilitation measures (structural civil & hydro-mechanical remedial works, electrical works and basic facility enhancement) under the proposed Dam Rehabilitation and Improvement Project (DRIP II) with a view to increase the safety and to strengthen dam safety management.

The Environment and Social Due Diligence has been conducted for decision-making on the sub-project with a view to identify, evaluate and manage the environment and social risks and impacts in a manner consistent with the World Bank ESF. ESDD has been carried out by studying the sub-project information and proposed interventions, assessing the magnitude of E&S risk and impacts with respect to key baseline data in immediate vicinity area. Stakeholder consultations with communities living downstream/vicinity of the dam, is not required at present; as risk considered as low. However SPMU shall provide information to all Stakeholders on the proposed interventions; to identify issues and concerns; and ascertain appropriate mechanisms for continued engagement.

Activity wise environment and social screening has been carried out to identify risks and impacts to classify the sub-project based on risk level (low, moderate or substantial and high) and recommend commensurate plans/measures to meet identified risks and impacts.

As per the ESDD exercise, risk/impacts that have been identified relate to Water Quality, Physical Environment, labour and SEAH/GBV. Environment risks of air, water, noise, land use, soil and resource use for construction of energy dissipation systems and construction of protection wall to prevent erosion during floods are considered low. Similarly, environment and social risk of labour camp and disposal of debris has also been identified as low. Though, the location of dam in Bhagirathi Eco Sensitive Zone, but impact of rehabilitation work on ESZ has also been considered low. Risk of all other activities has also been identified as Low. These risks are and localised, short term and temporary in nature which can be further managed with standard ESMP and guidelines. OHS is a substantial risk activity and is being treated separately through OHS plan in accordance with WB ESHS guidelines.

A standard ESMP customised to sub-project will be prepared in accordance with the ESMF. The customised ESMP will address the following:

- Gender Based Violence or SEA/SH related actions (ESS1)
- Labour Management Procedure (ESS2)
- Resource Efficiency and Pollution Prevention (ESS3)
- Community Health and Safety (ESS4)

- Bio-diversity Conservation Plan (ESS6)
- Stakeholders Engagement Plan (ESS10)

Overall, the proposed activities within this dam sub-project have low to moderate risks resulting in the sub-project to be categorized as Low risk category. These risks and impacts can be effectively mitigated with effective implementation of mitigation plans by SPMU/IA, Contractors and monitoring by EMC, SPMU and CWC.

**1.1 PROJECT OVERVIEW**

The proposed Dam Rehabilitation and Improvement Project (DRIP II) would complement the suite of ongoing and pipeline operations supporting India’s dam safety program. The project development objective (PDO) is to increase the safety of selected dams in participating States and to strengthen dam safety management in India. Project Components include:

- Component 1: Rehabilitation and Improvement of Dams and Associated Appurtenances (US\$ 577.14 million);
- Component 2: Dam Safety Institutional Strengthening (US\$45.74 million);
- Component 3: Incidental Revenue Generation for sustainable operation and maintenance of dams (US\$26.84million);
- Component 4: Project Management (US\$68.13 million).
- Component 5: Contingency Emergency Response Component (US\$0 million).

The project is likely to be implemented for 300 dams in 18 states across the country. The primary beneficiaries of the project are the communities that live in dam breach flood inundation areas and the communities that depend on water, irrigation and electricity services provided by the dams that could be compromised by poor dam performance or failure. In addition to saving lives, improved dam safety will avoid potential flood damage to houses, farm areas, infrastructure (roads, bridges, other public and private infrastructure) and industrial and commercial facilities. Improved dam safety will also reduce the likelihood of service interruptions due to dam failure as well as potentially improving dam service provision, overall efficiency and storage capacity, including during drought periods.

**1.2 SUB-PROJECT DESCRIPTION – MANERI DAM**

Maneri Bhali Stage I Hydro Electric Project consists of a 39 m high concrete gravity dam with 4 bays of ogee spillway across the river Bhagirathi at Maneri, 15 km towards Gangotri from district headquarter Uttarkashi. The 90 MW capacity surface power house comprises of 3 Francis turbines of 30 MW each located at Tiloth. The generation from Maneri Bhali Stage I scheme is around 450 MU per year since its commissioning in 1984. The project was constructed and commissioned by the erstwhile UPSEB. At present, project is being managed by UJVNL. Maneri Dam diverts a maximum of 69 cumec water through 8.63 km long head race tunnel.

Salient features of Maneri Bhali Stage I Project are reported below:

<b>Project Name</b>	Maneri Bhali Project Stage I
River Basin	Ganga basin
River/Stream	Bhagirathi

District	Uttarkashi
Latitude/Longitude	30° 04' 04" / 78° 03' 02"
Type of Project	Hydro power
Gross Command Area (GCA)	NA
Cultivable Command Area (CCA)	NA
Hydro Power Installed Capacity	90 MW
Average Annual Energy Generation (MU):	450 MU
Domestic/Municipal/Industrial Water Supply (Annual)	NA
<b>Dam</b>	
Type	Concrete Gravity
Total length of the Main dam	127.00 m
Length of Embankment dam	NA
Length of Masonry/Concrete dam	127.00 m
Top width of Embankment Dam	NA
Top width of Masonry/Concrete Dam	6.40 m
Elevation of top of Embankment Dam	NA
Elevation of top of Masonry/Concrete Dam	1298.00 m
Elevation of top of Upstream Solid Parapet Wall	1298.00 m
Height of Embankment Dam above Lowest River Bed Level	NA
Height of Masonry/Concrete Dam above deepest foundation level	39 m
Lowest River Bed Elevation	1261m
Deepest Foundation Elevation	1259m
<b>Saddle Dam</b>	NA
<b>Spillway</b>	
Type of Spillway	Ogee type
Length of Spillway	64m
Location of Spillway	Central spillway
Spillway Crest Level	1280.50m
Number of bays	4
Total Discharging Capacity at MWL	5000cumec
Spillway Gate	Radial
Spillway gate size	13 m width & 14.55 m height
Type of Hoist for Spillway Gates	Rope drum
Type of Energy Dissipation Arrangement	Slotted roller bucket type
<b>Sluice Arrangement</b>	NA
<b>Reservoir</b>	
Catchment Area at damsite	4024 sq km
Maximum Water Level	1294.50m
Full Reservoir Level	1294.50m
Minimum Draw Down Level	1286.50m
Gross Storage Capacity at FRL	1.985 MCM
Live Storage Capacity	1.985 MCM
Reservoir Spread Area at FRL	0.133 sq km
Date of Starting the Construction	1977
Date of Completion	1982
Date of first full impoundment	1982

Original Inflow Design Peak Flood	5000 cumec
Maximum observed flood peak and date	1457 cumec on 16/06/2013
Revised Inflow Design Peak Flood	8368cumec

### 1.3 PROPOSED INTERVENTIONS/ACTIVITIES AND INTENDED OUTCOMES

The Dam Safety Review Panel (DSRP), constituted by CWC, Government of India for the purpose of inspection of the projects those are planned to be undertaken for the repair, rehabilitation and modernization work under World Bank aided DRIP-II schemes, made a visit to Maneri Dam on 22/10/2019 for inspection purpose and recommended measure to improve the safety and performance of demand associated appurtenances in a sustainable manner, and also to strengthen the dam safety institutional set-up.

The objectives of the project are to be achieved through investments for physical and technological improvement activities, managerial upgrading of dam operations, management and maintenance, with accompanying institutional reforms. The project will improve the safety and operational performance of demand mitigates risks to ensure safety of downstream population and property. The following rehabilitation proposals as described in the PST have been formulated based on DSRP recommendations and these proposals form the basis for preparation of present ESDD report. Other rehabilitation measures listed under Part B in PST, are not being taken up at the present time and therefore are not considered as part of the ESDD.

- Construction of energy dissipation systems in the d/s of Maneri Dam
- Construction of protection wall in the vicinity of Model Inter College upstream of dam at right bank along the reservoir rim to prevent erosion during floods.
- Consultancy works related to review of dam design & its appurtenant structures
- New trash rack panels with protective coating at power intake
- Replacement of steel wire rope 45 mm dia with socket pin etc
- Procurement of a suitable vehicle for public announcement and other purposes for dam
- Procurement of 25 KVA DG set for Maneri dam

**Figures 1.1** and **1.2** provide photographs of key infrastructure proposed for rehabilitation works and also major interventions locations.

Condition of trash racks at the intake of Maneri Dam

Unprotected Right Bank Upstream of Maneri Dam

Unprotected right bank upstream of Maneri Dam

Proposed repair of damaged piers on U/S side of Maneri Dam Using high performance concrete

Proposed repair of damaged piers on U/S side of Maneri Dam Using high Performance concrete

Proposed petrographic analysis for the suspended sediments and chemical analysis of the water in the immediate Vicinity of the Dam on the U/S

Construction/Repair of roads at Maneri Dam site

Proposed Replacement/Repair of Damaged steel Liner/ Plate on piers/ glacis of spillway at D/S side of Maneri Dam

Damaged steel liner/ plate on/ glacis of spillway at D/S Side of Maneri Dam

Proposed repair of damaged sedimentation chamber

Proposed repair of damaged flushing conduit

Proposed repair of damaged flushing Condui

Proposed construction of TRC Gate Including HM works (Back Regulator ) at the confluence point of TRC of Tiloth Powerhouse & Bhagirathi River at Uttarkashi

Proposed construction of TRC Gate Including HM works (Back Regulator ) at the confluence point of TRC of Tiloth Powerhouse & Bhagirathi River at Uttarkashi

Proposed construction of Energy Dissipation Systems as per the Recommendation of model studies

Proposed construction of Energy Dissipation Systems as per the Recommendation of model studies

Proposed Reaming & Redrilling of Drainage holes Inside Foundation Gallery

Construction/Repair of roads at Maneri Dam site

**Figure 1.1: Selected Photographs of Improvement/Intervention area**

**Figure 1.2: Project Area showing major intervention locations**

## 1.4 IMPLEMENTATION ARRANGEMENT AND SCHEDULE

As can be seen from the list of activities proposed under dam rehabilitation project; these activities can be divided into civil works main package, other package and instrumentation. Civil work will be carried out by contractor(s) as these are labour intensive activities and would be completed over a period of 36 months. Project Authority will hire contractor(s) based on national open competitive procurement using a Request for Bids (RFB) as specified in the World Bank's- Procurement Regulations for IPF Borrowers, July 2016, Revised August 2018 Procurement Regulations), and is open to all Bidders as defined in the Procurement Regulations. Following is the overall implementation and procurement schedule:

**a) Overall Phasing of Project Implementation:**

Proposed Starting of implementation (MM/DD/YYYY) : Jan, 2021  
Proposed Ending of implementation (MM/DD/YYYY) : Dec 2023  
Implementation Duration (months) (MM) : 36months

**b) Timeline phasing of implementation:**

Sl. No.	Description	From (month/year)	To (month/year)	Status of Procurement Process
1	Civil Work – Main Package	Jan 2021	Dec 2023	Procurement process will be initiated after obtaining approval of the PST from World Bank.
2	Other Packages	Jan 2021	June 2023	
3	Procurement – instrumentation, goods, inspection vehicles	Jan 2021 – June 2023		

## 1.5 PURPOSE OF ESDD

The overall project (DRIP II) was categorized as **High Risk** as per the internal Environment and Social Risk Classification of the Bank. The Environment and Social Due Diligence has been conducted to use it as a tool for decision-making on the sub-project with the following specific objectives:

- i. To identify, evaluate and manage the environment and social risks and impacts of the sub-project in a manner consistent with the ESSs;
- ii. To adopt a mitigation hierarchy approach to the project's E&S risks i.e. a) anticipate and avoid risks and impacts; b) minimize or reduce risks and impacts to acceptable levels, if not avoidable; c) once risks and impacts have been minimized or reduced, mitigate; and (d) where significant residual impacts remain, compensate for or offset them, where technically and financially feasible;
- iii. To help identify differentiated impacts on the disadvantaged or vulnerable, if any, and to identify differentiated measures to mitigate such impacts, wherever applicable;

- iv. To assess the relevance and applicability of environmental and social institutions, systems, laws, regulations and procedures in the assessment, development and implementation of projects, whenever appropriate; identify gaps, if any exist, and
- v. To assess borrower's existing capacity, gaps therein, and identify areas for enhanced capacity towards management of E&S risks.
- vi. Based on the categorization of Environment and Social risks and impacts of the dam sub-project, to determine whether ESIA is to be carried out using independent third-party agency or a standard ESMP customized to mitigate E&S risks and impacts will suffice.

## **1.6 APPROACH AND METHODOLOGY OF ESDD**

---

The following approach has been adopted for ESDD:

- i. Study sub-project information, proposed interventions, their magnitude and locations and carry out assessment of each proposed intervention to identify the magnitude of E&S risk and impacts;
- ii. Review relevance and applicability of national and state legal requirements and Bank's ESF policy, standards and directives and preliminary assessment of applicability of legal requirement and ESS framework (2-8)
- iii. Conduct site visit to understand baseline environment and social settings, proposed activities under the sub-project, their location and sensitivity, if any.
- iv. present key baseline data essential for impact assessment in immediate vicinity area of proposed interventions from secondary sources, such as land-use, protected areas in vicinity, ascertain presence of indigenous (schedule tribe)/vulnerable people, etc.
- v. Undertake institutional assessment to identify existing capacities & relevant gaps to manage E&S risks and impacts
- vi. Conduct preliminary stakeholder consultations to help identify potential stakeholders; to provide information on the proposed interventions; to identify issues and concerns; and ascertain appropriate mechanisms for continued engagement
- vii. Carry out activity wise environment and social screening and identify risks and impacts. Classify the sub-project based on risk level (low, moderate or substantial and high) and recommend commensurate plans/measures to meet identified risks and impacts.

Stakeholder consultations with communities living downstream/vicinity of the dam, could not be held in the current circumstances due to COVID and these shall held as soon as situation is conducive for holding such consultations.

## **2.1 POLICY AND LEGAL FRAMEWORK**

---

India has well defined environmental and social regulatory framework. The regulation applicability depends on nature of work and location of work. Broadly legislation can be divided into four categories viz environmental, forests, wildlife conservation and social. The applicability analysis of regulations pertaining to all the above four categories was carried out. The applicability of World Bank ESF comprising, 10 ESSs (ESS1 to ESS10) to the proposed rehabilitation proposals and Standard specific requirements were analysed. Further, a comparison of national environmental and social regulations versus World Bank's ESS has been carried out along with the gap analysis. Applicability of Indian regulations, World Bank's ESS along with comparison and gap analysis is discussed in ESMF.

Central Water Commission, Ministry of Jal Shakti, Government of India has prepared "Operational Procedures for Assessing and Managing Environmental Impacts in Existing Dam Projects" and is under publication as a guiding document for the dam owners to systematically address in advance the environmental safeguard requirements and have discussed in detail all applicable legal requirement. Reference has been drawn from this document as well, while carrying out applicability analysis.

Indian environmental regulations requiring environment clearance is for new dam projects specifically for the purpose of hydropower generation and/or irrigation projects and vary with generation capacity for hydropower projects and culturable command area served by irrigation projects. Forest related clearances become applicable, if new or any modification in any existing project requires diversion of forest land for non-forestry purposes. Wildlife Clearance process gets triggered if the project is in proximity to protected area or activities are proposed within protected areas (PA).

For the proposed rehabilitation activities at Maneri Dam, regulatory clearances will not be applicable as neither it is a new dam project nor any forest land required for the rehabilitation work. The dam is located within Bhagirathi Eco-sensitive Zone (ESZ), however, ESZ notification dated 18/12/2012 permits operation of existing dams within the ESZ and therefore repair and maintenance work do not require any permission. Other applicable regulatory requirements are discussed in ESMF.

## **2.2 DESCRIPTION OF INSTITUTIONAL FRAMEWORK**

---

The sub-project will be implemented by Uttarakhand Jal Vidyut Nigam Limited (UJVNL). UJVNL have in-house expertise to address E&S issues. As per the suggestions of CPMU/CWC, if required specific consultancy services of Environmental and Social experts to assist the department in resolving E & S issues shall be outsourced.

A formal system has been established for dealing with external complaint or a formal GRM at central level and connected to project site level. There is also an internal complaint committee as per Sexual Harassment Act at head office level and the same has used as platform for dam level also.

As committed in ESCP, a Grievance Redress Mechanism (GRM) will be established and operated by the contracted agencies to address Project workers workplace concerns before start of work. SPMU will have oversight responsibility on the functioning of the GRM.

Assessment of physical, ecological and socio-economic conditions at dam site and immediate surrounding has been carried out based on secondary information and site observations; as discussed below.

### 3.1 PHYSICAL ENVIRONMENT

#### Land Use/Land Cover

The project surrounding area's land use and environmental sensitivity was analyzed using GIS techniques. Land use/ land cover map within 5 km radius of dam is presented at **Figure 3.1**. Present land use is mainly deciduous forest followed by agriculture fallow land, scrub forest and scrub land, grazing land, water bodies (mainly river and reservoir) and settlement. There are 13 habitations or village falling in 5 km of radius of the Maneri Dam; they are Maneri, Jamak, Kamar, Kankrai, Kisanpur, Nirakot, Siror, Netala, Hina, Kaneth, Aungee, Didsari and Wayra May Lunthu.

*[(Source: Digital data on land use/land cover maps using bhuvan prepared by National Remote Sensing Centre (NRSC) with Uttarakhand Space Application Centre along with further refinement using Google Earth]*

**Figure 3.1: Land Use and Land Cover Map of 5 km radius around dam site**

## **Natural Hazards**

---

Potential of natural hazards such as flooding and earthquake have been assessed.

Project has been designed for a flood of 5000 cumec. Review of design flood has been carried out by CWC and SPF has been worked out as 8368cumec. It is proposed to carry out a detailed study of structural/non-structural measures to take care of hydrologic safety on account of the revised flood during concurrency of DRIP II.

Project falls in earthquake zone IV, and same was considered at the time of design and there is no need for seismic design review. The Bureau of Indian Standards [IS 1893 (Part I):2002], has grouped the country into four seismic zones, viz. Zone II, III, IV and V. Zone II is the least active and Zone V is the most active.

## **3.2 PROTECTED AREA**

---

Maneri Bhali Stage I Project falls within Bhagirathi Eco-sensitive Zone, notified on December 18, 2012 by Ministry of Environment & Forests, Government of India from ecological and environment point of view. The Eco-sensitive zone extends from Gaumukh to Uttarkashi, with a total area of 4179.59 sq. Km covering the entire watershed of about 100 Km stretch of the river Bhagirathi.

The notification prohibits setting up of new hydro-electric projects and expansion of existing plants on the river Bhagirathi and all its tributaries from Gaumukh to Uttarakashi except micro or mini hydel power projects, which would serve the energy needs of the local communities, subject to consent of the gram sabha and all other requisite clearances; however, permits existing hydropower projects to continue to operate with strict environmental compliance and social audit. The notification also regulates extraction of ground water, tree cutting without prior permission, air and noise pollution as per the guidelines of the state forest department.

As there is no restriction on operation of existing hydropower projects, rehabilitation work at Maneri dam would not require any permission, however, all the guidelines with respect to pollution/waste generation need to be followed.

A map of Bhagirathi Eco-sensitive Zone along with that of connected protected areas viz. Govind National Park and Gangotri National Park showing location of Maneri Dam within ESZ is given at **Figure 3.2**.

**Figure 3.2: Location of Maneri Dam within Bhagirathi Eco-sensitive Zone**

### 3.3 SOCIAL ENVIRONMENT

The Maneri Dam project is located in district Uttarkashi in the state of Uttarakhand. Uttarakhand state does not have any Schedule V<sup>1</sup> areas.

The Uttarkashi district is located on the northern portion of Uttarakhand State. The district consists of six tehsils and for implementation and monitoring of development schemes at rural level the district is divided into six community development blocks. As per census 2011, there are 707 revenue villages, out of which 694 villages are inhabited and 13 villages are un-inhabited. The district's economy is predominantly dependent on Agriculture & allied activities.

The brief demographic characteristic of the district is given in the table below:

<sup>1</sup>**Scheduled Areas** are areas in India with a preponderance of tribal population subject to a special governance mechanism wherein the central government plays a direct role in safeguarding cultural and economic interests of **scheduled** tribes in the **area**.

Description	Number	Respective %	Description	Number	Respective %
<b>No. of Households</b>	67,602	--	<b>Household Size</b>	<b>5</b>	--
<b>Total Population</b>	3,30,086	--	<b>Population (0-6 age)</b>	46,307	14.03
Male	1,68,597	51.08	Boys (0-6 age)	24,165	52.18
Female	1,61,489	48.92	Girls (0-6 age)	22,142	47.82
Sex Ratio	958		Sex Ratio (0-6)	916	
<b>Population (SC)</b>	80,567	<b>24.41</b>	<b>Population (ST)</b>	3,512	<b>1.06</b>
Male	40,833	50.68	Male	1,651	47.01
Female	39,734	49.32	Female	1,861	52.99
<b>Literates</b>	2,15,126	<b>65.17</b>	<b>Literacy Rate (in %)</b>	--	<b>75.81</b>
Male	1,28,237	59.61	Male	--	88.79
Female	86,889	40.39	Female	--	62.35
<b>No. of Workers</b>	1,57,276	<b>47.65</b>	<b>Cultivators</b>	1,17,264	<b>74.56</b>
Male	84,265	53.58	<b>Agricultural Labours</b>	4,387	<b>2.79</b>
Female	73,011	46.42	<b>Household Industrial Workers</b>	3,122	<b>1.99</b>
<b>No. of Main Workers</b>	1,28,367	<b>81.62</b>	<b>Other Workers</b>	32,503	<b>20.67</b>
<b>No. of Marginal Workers</b>	28,909	<b>18.38</b>			

*Source: Census of India, 2011 (District Handbook)*

According to Census 2011, total population of the district is 3,30,086, out of which 51.08% are males and 48.92% are females with the sex ratio of 958. The population density is just 41 persons per sq km in the district. There are 14.03% population belongs to 0-6 age group, out of which 52.18% are boys and 47.82% are girls in the same age group with the sex ratio of 916.

The district has literacy rate of 75.81%. The male literacy rate in the district is 88.79% and that of female is 62.35%, thus a gender gap in literacy rate of 26.44% in the district.

In the district, there is 24.41% population belongs to the Scheduled Caste community. However, only 1.06% population belongs to the Scheduled Tribe (ST) community in the district. These ST households will be taken into account during the preparation of Emergency Action Plan for the Maneri Dam Project.

Work participation rate of the district has observed about 47.65%, out of which 53.58% are male workers and 46.42% are female workers, thus a gender gap in work participation rate of 7.16%.

Among the total work force in the district, 81.62% are Main Workers and 18.38% are Marginal Workers. About 74.56% workers are cultivators and only 2.79% are agricultural labourers. About 22.66% of work force is engaged in other than agricultural activities including 1.99% household industrial workers.

### **3.4 CULTURAL ENVIRONMENT**

---

List of National Monuments in Uttarakhand and list of State Protected monuments in Uttarakhand have been reviewed. There are protected monuments identified by Archaeological Survey of India however none of them are in the vicinity of the project.

#### **4.1 SUB-PROJECT SCREENING**

---

The subproject screening is undertaken following a three step screening methodology as described in ESMF. Process of risk /impacts identification is done using screening process considering the proposed interventions at each dam as provided in the Project Screening Template using first screening format (SF-1). Applicable interventions are further classified based on their location i.e. within dam area or outside the dam area. Each activity is reviewed for the applicability under-sub project, location of applicable activity and likely risks and impacts. The SF-1 format is used to ascertain the types of E&S risks for each of the proposed rehabilitation activity e.g. Risk/Impact on Water Quality, Fisheries, Conservation Area, Protected Area, Ecology, Physical Environment, Cultural Environment, Tribal Presence, Private Land/Assets/Encroachers/Squatters, Labour, Migrant Labour and GBV risks – each of these corresponding to the ESS 2-8.

The second format (SF-2) is used to assess the extent of risk/impact intensity for each of the identified E&S risk and is used to categorize the risk level as Low/Moderate/Substantial/High. Finally, using a third E&S risk summary format (SF-3), the risk categories for all different types of E&S risk and impacts is summarized and the highest of the risk categories is assigned as overall risk category for the given Dam sub-project. Based on the above findings, the ESDD report recommends Risk category of the Dam sub-project – whether it is Low/Moderate/Substantial/High and types of instruments that need to be prepared as part of the ESMP along with the responsibilities and timelines.

Outcome of three stage screening exercise is discussed below.

**Step I Screening (using Form SF-1):** Sub-Project Component, Construction Support Preparatory Intervention related vs. Nature of Risk/Impact

Screening indicated that all project components related activities are limited to within the dam area/premises. Due to nature of these activities, likely impacts will be on physical environment in terms of air pollution, noise pollution and waste generation. None of the proposed structural interventions involve acquisition of private land and/or private assets. These activities in no way cause restriction on access to land or use of resources by local communities and there is no economic displacement envisaged due to the sub-project. Activities interfacing with water bodies – river/reservoir will have risk of spillage of construction material, and debris leading to minor level water pollution and impacts on fishes.

Pre-construction and construction stage major auxiliary or preparatory intervention are within dam area. Deployment and haulage of heavy machinery, setting up of workshop, operation of concrete mixture and heavy pumps will be within dam area. Other activities such as labour accommodation and debris disposal will also be kept within the dam project area due to its location falling within the eco-sensitive zone at pre-existing dumping site. Further, these dumping sites will be levelled and compacted. Activities involving machinery and equipment will have impacts on physical environment. Transportation of material, debris disposal and labour accommodation are likely to generate pollution and impact on physical environment. Though dam is located within the eco sensitive zone, but risk of some outside labour, transportation of man and material and civil and hydro-mechanical works will not have the potential impact to the natural habitat.

Project will involve project managers and supervisors, contracted workers – these would not include migrant workers as all the required labour will be fully supplied locally as technically skilled labour are available in the local vicinity due to exposure to civil & electro-mechanical maintenance works of nearby hydro power projects. Construction contractors are expected to stay at/near dam, set up construction equipment and machinery near work location at pre-existing/approved sites without impacting eco sensitive zone. Influx of skilled migrant labour, albeit few in numbers, for construction works is not likely. The labour will stay within the dam colony in existing accommodation facilities already developed, hence risk of SEA/SH are unlikely.

Output of this screenings enclosed as **Annexure I**.

**Step II Screening (using Form SF-2):** All applicable activities identified as having potential risks/impacts that were identified through Step I screening, are further screened for associated sub-activity and evaluated for the extent of risk. Sub-activity's Risk/Impact intensity is further categorised as Low (L), Moderate (M), Substantial (S) or High (H) based on following criteria:

Low	:	Localized, Temporary and Negligible
Moderate	:	Temporary, or short term and reversible under control
Substantial	:	Medium term, covering larger impact zone, partially reversible
High	:	Significant, non-reversible, long term and can only be contained/compensated

Each activity may have different type of risks/impacts and magnitude of separate risk may vary, as analysed under SF2. In SF2, each proposed rehabilitation activity is assessed for the nature of risk on various components of environment and social (based on SF1, Column 5) and then each one of these is separately evaluated for level of risk as Low, Moderate, Substantial or High; the highest risk level is recorded in column 5 of SF2 for each activity.

Occupational Health and safety: OHS is a substantial risk activity in almost all cases and is not being considered under screening criteria. Occupational health and safety is considered an important requirement of every project irrespective of size and type of the projects. It will be part of Contractor's ESMP.

All activities are categorized as low risk activities. E&S risks of none of the sub-activities for this sub-project is categorized as either Substantial or High risk. **The outcome of Screening is enclosed as Annexure II.** In case of GBV/SEAH, this site was assessed as Low risk. Based on consideration of all the above, summary of Risk/Impact (as per outcome of SF-2) is summarised for major sub-project activities under **Table 4.1 below.**

**Table 4.1: Summary of Identified Risks/Impacts in Form SF-3**

Project Activity	Environment Risks						Social Risks				
	Air, water, noise, land use, Soil, Resource use	Pollution downstream and upstream	General Ecology	Protected Area (Wild Life Sanctuaries, National Park and other natural habitat even if not protected)	Other RET species (flora and fauna) outside protected areas	Fish and Aquatic life within dam water body	Land	Tribal	Labour	Cultural heritage	GBV/SEAH
Civil (within dam Boundary)	L	L	L	L	None	L	L	L	L	None	L
Hydro Mechanical	L	L	L	L	None	L	L	L	L	None	L
Instrumental SCADA, surveillance	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
Painting	L	L	L	L	None	L	L	L	L	None	L
Road work	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
Safety measures (Siren, Lighting)	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
Major Civil Work like Additional Spill Way	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
Major Hydraulic Structure (tunnelling)	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
Major Civil Work extending beyond dam Area Like training Structure	L	L	L	L	None	L	L	L	L	None	L
Additional activities for Tourism /Solar/Fisheries/ Water recreation enhancement	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

**Criteria for Risk Evaluation:**

**Low:** Localized, temporary and Negligible

**Moderate:** temporary, or short term and reversible under control

**Substantial:** medium term, covering larger impact zone, partially reversible

**High:** significant, non-reversible, long term and can only be contained/compensated

**Occupational Health and safety:** OHS is a substantial risk activity in almost all cases and is being treated separately through OHS plan in accordance with WB ESHS guidelines and shall be applicable to all sub-projects. Hence is not being considered under screening criteria.

## 4.2 STAKEHOLDER CONSULTATION

---

As, there is no activity involving any construction, acquiring any land and property outside dam area, therefore, there is no requirement of stakeholder consultation meeting.

## 4.3 DESCRIPTIVE SUMMARY OF RISKS AND IMPACTS FROM ACTIVITIES BASED ON SCREENING

---

Based on the above screening analysis, potential impacts and risks from the sub-project are summarised below:

### ***Environmental Impacts and Risks***

1. Environment risks and impacts, as assessed above, for various project activities under this sub-project are categorised as Low due to localised nature of proposed activities i.e. activities remain limited to Dam area and controllable.
2. Execution of civil and hydro-mechanical work within dam body will generate localised impacts on physical environment and resource use; pose risk of exposure of workers requiring personal protective equipment (PPE) use.
3. Civil works interfaced with water body especially like construction of protection wall at right bank along the reservoir rim etc may pose risk of low level water pollution as well as impacts on land environment.
4. Construction waste, muck etc from above and construction of energy dissipation systems in the d/s of Dam etc require careful disposal at pre-acquired/pre-existing and approved site within dam area to minimise the risk of pollution on this count. Disposal site is available near dam site.
5. Since the project is within eco-sensitive zone, there is risk of impact on ecology due to civil and hydro-mechanical works. Therefore, there is a need to control environmental impacts from dam rehabilitation works, dispose the waste material at pre-existing disposal/dumping sites and control the waste water discharge from construction sites.
6. Rehabilitation work would require labour to work on various sections of dam involving working at height, working in confined spaces, working on reservoir side, etc; Further, workers will also be exposed to dust and noise and these will lead to occupational health and safety risks.

### ***Social Impacts and Risks***

1. As the interventions are within the dam premises and on the dam structure, there shall be no adverse impacts on land and assets due to any sub-component or sub-activities
2. The dam is not located in the Schedule V area, though; there is only about 1.06% scheduled tribe population in the district. Any households of the area shall not be directly impacted by project in any manner.
3. Influx of migrant labour will be low as these works will require only few but very skilled labours which are locally available. Also, very few of these workers will operate from existing accommodation facilities within the Dam premises/proximity and hence there would be minimal interface with communities and therefore significantly lower SEAH/GBV risks.

4. Waste generation from labour accommodation can pollute drinking water sources of community, and the same can be mitigated by providing adequate sanitation facilities. Labour camp with all sanitation facilities has already developed in dam colony. There will not be any impact on drinking water source due to labour camp waste.
5. No impacts are envisaged on cultural heritage as no such sites are identified within project vicinity.
6. Labour related risk would include:
  - Safety issues while at work like injuries/accidents/ fatalities leading to even death, while at work; Occupational health and safety risks due to exposure of workers to unsafe conditions while working at heights, working using lifts, handling of equipment and machinery, exposure to air and noise pollution etc. will be addressed through OHS guidelines. There is a govt. operated medical & health facility within the dam premise and same shall be extended to labours in case of any health risk and injuries to the labours. Also, health checkups will be provided to the workers periodically.
  - Short term effects due to exposure to dust and noise levels, while at work
  - Sexual harassment at work
  - Absence or inadequate or inaccessible emergency response system for rescue of labour/workforce in situations of natural calamities.
  - Health risks of labour relating to HIV/AIDS and other sexually transmitted diseases
  - Non-payment of wages
  - Discrimination in Employment (e.g. abrupt termination of the employment, working conditions, wages or benefits etc.)
  - Unclear terms and conditions of employment
  - Discrimination and denial of equal opportunity in hiring and promotions/incentives/training opportunities
  - Denial for workers' rights to form worker's organizations, etc.

## 5.1 CONCLUSIONS

### 5.1.1 Risk Classification

As per the ESDD exercise, risk/impacts that have been identified related to Water Quality, Physical Environment, labour and SEAH/GBV. The summarised environmental and social risks of identified activities with level of risk are presented in previous chapter. Environment risks of air, water, noise, land use, soil and resource use for Construction of energy dissipation systems in the d/s of Maneri Dam, Construction of protection wall in the vicinity of Model Inter College upstream of dam at right bank along the reservoir rim to prevent erosion during floods are considered low. Similarly, environment and social risk of labour camp and disposal of debris has also been identified as low. Though, the location of dam in Bhagirathi Eco Sensitive Zone, but impact of rehabilitation work on ESZ has also been considered low. As the project area falls within the ESZ to enhance bio-diversity of project area & to mitigate adverse effects, if any, it is proposed to undertake massive plantation near the reservoir rim with the help of state forest department. Risk of all other activities has been identified as Low. These risks are low and localised, short term and temporary in nature which can be easily managed with standard ESMP and guidelines.

Hence the overall risk of this sub-project Dam is categorized as low. OHS is a substantial risk activity and is being treated separately through OHS plan in accordance with WB ESHS guidelines.

### 5.1.2 National Legislation and WB ESS Applicability Screening

The applicability analysis of GOI legal and regulatory framework indicates that while, there are various legislation which will have to be followed by the contractor for the protection of environment, occupational health and safety of workers and protection of workers and employment terms. None of Indian legislation is applicable warranting obtaining clearance prior to start of construction/improvement work.

In addition to overarching ESS1, four ESS standards are found relevant to this sub-project as per reasons given in **Table 5.1** below:

**Table 5.2: WB ESF Standards applicable to the sub-project**

Relevant ESS	Reasons for Applicability of the standard
ESS2: Labour and Working Conditions	Due to engagement of Direct worker, Contracted workers and Community workers (likely for EAP and other non-structural interventions) for rehabilitation work
ESS3: Resource Efficiency, Pollution Prevention and Management	Civil and hydro-mechanical work including resource consumption; requiring protection of physical environment and conservation of resources

Relevant ESS	Reasons for Applicability of the standard
ESS 4: Community Health and Safety	Rehabilitation work, although limited to Dam complex, can increase community exposure to risk and impacts; directly or indirectly.
ESS 6: Biodiversity Conservation and Sustainable Management of Living Natural resources	Maneri Dam falls within Bhagirathi Eco Sensitive Zone. Rehabilitation work is limited to dam only, and therefore direct impacts on ESZ are not identified. However, to eliminate risks of indirect impacts & to enhance bio-diversity of project area if any, it is proposed to undertake massive plantation along the reservoir rim and nearby area with the help of state forest department.
ESS 10: Stakeholder Engagement Plan	For engagement of stakeholders in all structural and non-structural measures e.g. implementation of Early flood Warning system, siren systems, broadcasting facilities, Emergency Action Plan etc.

## 5.2 RECOMMENDATIONS

### 5.2.1 Mitigation and Management of Risks and Impacts

Since risks and impacts are low category, a standard ESMP customised to sub-project will be prepared in accordance with the ESMF. It shall cover the following aspects:

- a. SPMU shall customise the standard Environmental and Social Management plan (ESMP) that has been provided in the Environmental and Social Management Framework (ESMF) and make it part of bid document for effective adherence by contractors.
- b. ESMP will provide due measures for labour management and protection of environment quality and resource conservation (during handling of resources) in line with ESF standard ESS2 and ESS3 respectively. Likewise, due attention will be given to Occupational Health and Safety of workers and community in line with the requirements of ESS4 and World Bank Group guidelines on Occupational Health and Safety (OHS). SPMU/IA shall customise the standard ESMP in line with outline provided in the ESMF and ensure its adherence by contractor. The customised ESMP will address the following:
  - Gender Based Violence or SEA/SH related actions (ESS1)
  - Labour Management Procedure (ESS2)
  - Resource Efficiency and Pollution Prevention (ESS3)
  - Community Health and Safety (ESS4)
  - Bio-diversity Conservation Plan (ESS6)
  - Stakeholders Engagement Plan (ESS10)
- c. Contractor shall submit BOQ as per ESMP of the sub project.

Mitigation plans to meet requirements for relevant Standards with responsibility and stages are given in **Table 5.2** below:

**Table 5.3: List of Mitigation Plans with responsibility and timelines**

<b>WB-ESS Triggered</b>	<b>Mitigation Instrument</b>	<b>Responsibility</b>	<b>Timelines</b>
ESS1: Assessment and Management of Environmental and Social Risks and Impacts	<ul style="list-style-type: none"> <li>Gender Based Violence or SEA/SH related actions</li> </ul>	SPMU/IA	Before mobilization of contractor
ESS2: Labour and Working Conditions	<ul style="list-style-type: none"> <li>Labour Management Procedure (LMP) including OHS management plan</li> </ul>	SPMU/IA	Before mobilization of contractor
ESS3: Resource Efficiency, Pollution Prevention and Management	<ul style="list-style-type: none"> <li>Pollution Prevention and Environment Quality Management Plan (PPEQMP)</li> </ul>	SPMU/IA	Before mobilization of contractor
ESS 4: Community Health and Safety	<ul style="list-style-type: none"> <li>Community Health and Safety Management Plan (CHSMP)</li> </ul>	SPMU/IA	Before mobilization of contractor
ESS 10: Stakeholder Engagement Plan	<ul style="list-style-type: none"> <li>Stakeholder Engagement Plan</li> </ul>	SPMU/IA	By negotiation, if required

ESDD and ESMP will be placed on the [www.damsafety.in](http://www.damsafety.in) website as well as other accessible locations such as the office of Engineer in Charge at dam site as well at SPMU for reference and record. These documents would be disclosed/disseminated through other appropriate means like project meetings, workshops etc. Each IA will translate these documents in their local language, if required, and will upload in their respective websites and also make available at other accessible locations.

#### 5.2.2 Institutional Management, Monitoring and Reporting

ESMP will be customized for the sub project by SPMU/IA from standard ESMP included in ESMF and shall be shared with CWC by SPMU for their review/endorsement and approval before including in the bid document.

SPMU/IA will designate Nodal Officer(s) (full time in-house engineering staff with E&S expertise) to coordinate and supervise E&S activities. They shall be at the level of Executive Engineer/ Deputy Directors and shall provide commensurate time to comply with E&S related activities. Brief TORs for these Nodal E&S officers is included in ESMF. The SPMU, in case in-house expertise not available, will hire the qualified staffs on need basis to support management of E&S risks including Environmental and Social Experts for ensuring compliance with the Bank's ESF and ESS's and ensuring that these activities shall be implemented as per the procedures.

SPMU/IA shall advise contractors about applicable legislative requirements and ensure that contractors prepare its own ESMP (C-ESMP) as outlined in ESMP for this sub-project and submit compliance reports to SPMU/IA on quarterly basis. SPMUs will share regular implementation status of ESMPs to CWC and The World Bank in line with ESMF on quarterly basis.

SPMU/IA shall establish and operationalize a grievance mechanism to receive and facilitate resolution of complaints and grievances, from the communities and other stakeholders including implementation partners. GRM works within existing legal and cultural frameworks and shall comprise project level and respective State level redressal mechanisms. Most Project related grievances could be minor and site-specific.

EMC (Engineering and Management Consultant) for the project will have sufficient staff with skills on Environment and Social aspects. Awareness raising and capacity building on the new Environmental and Social Framework (ESF) need to be carried out for the environment and social staff engaged and this will be an area of continued focus, with a view to generate awareness at to dam level. EMC will develop formats for regular supervision and monitoring on E&S issues and undertake site visits/ inspections of the dam sites to monitor for compliance; collate and review QPRs and set up a monitoring and reporting system on E&S issues.

Overall, the proposed activities within this dam sub-project have low risks resulting in the sub-project to be categorized as low risk category. These risks and impacts can be effectively mitigated further with effective implementation of mitigation plans by SPMU/IA, Contractors and monitoring by EMC, SPMU and CWC.

## Annexure I: Form SF1

Sl. No	Project Component	Applicable (A), Not Applicable (NA)	Environment and Social Risk Associated within dam area (DI), Beyond Dam Area (DE)	Likely Nature of Risk/Impact Water Quality (WQ), Fisheries (F), Conservation Area (CA), Protected Area (PA), Ecological (E), Physical Environment (PE), Cultural (C), Tribal Presence (T), Impact on private land/assets/encroachers/squatters (LA), Labour (L), GBV risks (G), (Write whichever is applicable)
1	2	3	4	5
<b>A</b>	<b>Nature of Project Component and related sub activity Related</b>			
1	Reservoir Desiltation	NA		
2	Major structural changes – Spillway construction (Improving ability to withstand higher floods including additional flood handling facilities as needed.)	NA		
3	Structural strengthening of dams to withstand higher earthquake loads	NA		
4	Structural Improvement/Repair work - upstream of Dam site (interfacing dam reservoir) (like u/s face treatment etc.)	A	DI	WQ, F, PA, PE, L, G
5	Structural Improvement/Repair work -Downstream of Dam site (with no interfacing with dam reservoir)	A	DI	PA, PE, L, G
6	Re-sectioning earth dams to safe, stable cross sections	NA		
7	Hydro-mechanical activities with interface with dam reservoir	A	DI	WQ, PA, PE, L, G
8	Hydro-mechanical activities Downstream of Dam site (with no interfacing with dam reservoir)	NA		
9	Instrumentation, General lighting and SCADA systems	NA		
10	Basic Facilities (like access road improvement, renovation of office, etc)	NA		
11	Utility installation like standby generator, or setting up solar power systems	A	DI	PE, L
12	Painting of dam u/s or d/s or both faces	A	DI	PE, L
13	Water recreation activities	NA		
14	Tourism Development	NA		
15	Installation of Solar power/floating solar	NA		
16	List any other component not listed above			
<b>B</b>	<b>Pre-construction and construction stage major auxiliary or preparatory intervention</b>			
1	Acquisition (diversion of forests land for non-forest purposes) of forest land	NA
